-

PROJECT WORK

- **Personal Airport Navigator** (<https://github.com/hunghanchen/Aero-Trace.git>) – Ongoing
 - Applied Angular, Django, Restful API, Cloud SQL, and python into personal airplane tracker and presented as web application
 - Fetch data through Toronto Pearson website API, user can input flight information include destination, transport location, and anything connected to flight information, application will response simultaneously and save to user account which include Google, and Facebook authentication
 - Show the airport features for users can spend time around the airport and have reviews function for users can take reference or comment
 - Adapted Leaflet JavaScript to locate person location and show direction to the destination client choice
- **Online ordering Pizza** Aug, 2020
 - UWP based online pizza ordering system interacting with databases and user email
 - Applied CRUD to the database, users can browser their history order, and receive mail after ordering pizza
 - Admin can use the same application to view as the mode of admin. And browser and modify data
